

ACIDIC POLISHING SLURRY FOR THE CHEMICAL-MECHANICAL
POLISHING OF SiO₂ ISOLATION LAYERS

ABSTRACT OF THE DISCLOSURE

An acidic polishing slurry for chemical-mechanical polishing, containing 0.1 to 5% by weight of a colloidal silica abrasive and 0.5 to 10% by weight of a fluoride salt, is distinguished by a higher polishing selectivity with regard to the rate at which silica is removed compared to the rate at which silicon nitride is removed compared to a conventional polishing slurry containing pyrogenic silica.
